

# Hillsborough County Board of County Commissioners Investment Portfolio Report for Month Ended September 30, 2013

Investments by Asset Class	Market Value in thousands	Maximum by Policy*	Actual Allocation
Bank accounts <sup>1</sup>	\$ 80,704	100 %	4.7 %
State of FL, SBA Florida Prime (money mkt pool)	131,377	50 %	7.7 %
US Treasury securities	547,704	100 %	32.0 %
US government sponsored agencies' securities	698,667	60 %	40.8 %
Commercial paper notes	84,859	20 %	5.0 %
Corporate notes	82,582	15 %	4.8 %
Other:			
Money market mutual funds	43,960	50 %	2.6 %
Municipal bonds (general obligation)	42,095	25 %	2.5 %
Accrued interest at purchase	658	--	0.0 %
<b>Total BOCC Investment Portfolio</b>	<b>\$ 1,712,606</b>		<b>100.0 %</b>

\*The objectives of the **County's Investment Policy** (Ordinance 08-6) are safety of principal, maintenance of liquidity, and return on investment, in that order. The BOCC Investment Portfolio meets these objectives. The chart above shows that the investment portfolio is invested in safe investments. In addition, there is sufficient liquidity to meet operational needs. The portfolio also has a low overall weighted average "days to maturity" of only 374 days.

<sup>1</sup>These bank deposits are secured by the Qualified Public Depository (QPD) program or FDIC coverage. The QPD program consists of a multiple financial institution collateral pool set up by Chapter 280, Florida Statutes. QPDs are required to pledge eligible securities as collateral. Any losses to governmental depositors are covered by the sale of collateral, and by assessments to other QPDs if needed.

**Hillsborough County Board of County Commissioners**  
**Investment Portfolio Report for Month Ended September 30, 2013**  
**(Continued)**

<b>Interest Earnings, in thousands</b>	<b>Current Month</b>	<b>Fiscal Yr to Date</b>
Actual interest earned	\$ 569	8,432
Fair value change <sup>2</sup>	1,465	1,952
Total return	<u>\$ 2,034</u>	<u>10,384</u>
Actual rate of return <sup>3</sup>	0.40 %	0.46 %

<sup>2</sup>**Fair value change** shows the net change in the market value of the investment portfolio. It shows unrealized gains and losses during the period. Volatility in market interest rates is a major cause of fair value change fluctuations during the period. The investment portfolio can be set up to reduce fluctuations in value by having a shorter "days to maturity." Here is an example of how rising or falling interest rates affect the value of the investment portfolio:

- If market interest rates rise by 0.3 percentage points, then the portfolio will lose 0.3% in value.
  - If market interest rates fall by 0.3 percentage points, then the portfolio will gain 0.3% in value.
- Reducing the weighted average "days to maturity" would reduce risk (fluctuations in value), but it would also reduce potential gains. The investment portfolio's "days to maturity" is currently at a relatively low risk level of 374 days.

<sup>3</sup>The focus of this report is on actual interest earnings, because actual interest earnings are available to be spent as budgeted by the Board of County Commissioners. The unrealized gain or loss associated with fair value change is not available to be spent unless the entire investment portfolio were liquidated (converted to cash).

The Investments by Asset Class chart on the first page excludes State of Florida, SBA Fund B because it represents funds frozen by the Florida SBA. However, the Interest Earnings Chart on this page includes Fund B fair value changes because these changes are included in total return which is distributed to County funds that earn interest, as specified by governmental accounting standards.

This report was prepared by the Clerk of Circuit Court's County Finance Department. For more information contact Finance Director Timothy Simon at 813.307.7032 or Assistant Finance Director Ajay Gajjar at 813.307.7026.
